FOR IMMEDIATE RELEASE

## SaraPath Diagnostics Implements Cerner Solution

Sarasota, Florida, August 28, 2009 – After evaluating several solutions available on the market for improved patient safety during the course of a year, SaraPath Diagnostics partnered with Cerner to implement their CoPathPlus® Advanced Barcoding & Tracking module (AB&T) into SaraPath's laboratory workflow.

The Advanced Barcoding & Tracking module utilizes 2D barcoding technology providing the ability to track slides, cassettes and containers processed through the laboratory. AB&T ensures that a case is correctly identified in all key areas of the labs workflow by generating message statements for mismatched materials. This produces positive slide identification and matching of materials for a case thus increasing patient safety.

SaraPath Diagnostics implemented the Cerner AB&T module into their anatomical pathology laboratory with key areas in Surgical Gross, Histology and the pathologists' workstations. The Cerner solution was selected by SaraPath because of its reputation and the module's seamless integration with their LIS system.

For more information, contact Michelle Chambless at 941.362.8900, or visit SaraPath Diagnostics at [www.sarapath.com](http://www.sarapath.com).

SaraPath Diagnostics is one of the oldest and largest independent pathology and laboratory practices in Southwest Florida. For over 35 years SaraPath has focused exclusively on providing exceptional pathology diagnostic services, as well as full inpatient hospital based pathology and medical director services. SaraPath Diagnostics is dedicated to providing the highest quality pathology services, and to work together with clinicians to advance patient care.
